

Commodity Movements

Commodity Flow Survey

Abstract

The Commodity Flow Survey (CFS) provides data on the movement of freight by type of commodity shipped and by mode of transport. The CFS is a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and includes major improvements in methodology, sample size and scope. The Bureau of the Census used a sample of 200,000 domestic establishments randomly selected from a universe of about 800,000 in manufacturing, mining, wholesale, and some selected activities in retail and service. Each selected establishment reported a sample of shipments for a two-week period in each of the four calendar quarters of 1993. This produced a total sample of about 12 million shipments. For each sampled shipment, respondents reported domestic origin and destination, Standard Transportation Commodity Classification (STCC) code, weight, value, and modes of transport. Respondents also provided information on whether the commodity was shipped in a container, a hazardous material, or an export.

Source of Data

A sample of manufacturing, mining, wholesale, auxiliary warehouses, and selected retail and service establishments completed a questionnaire.

Attributes

Geographic Coverage of Data: U.S. totals, state, 89 National Transportation Analysis Regions (combination of Bureau of Economic Analysis Economic Areas)

First Developed: 1993

Update Frequency: Quinquennial (next planned survey year is 1997)

File Format: Aggregate data only will be released

Media: CD-ROM, Printed source, Internet

Significant Features/Limitations

The 1993 CFS differs from previous surveys in expanded coverage of intermodal transportation, additional industry coverage, and more detailed geographic levels. Earlier surveys reported only the principal mode. The 1993 survey asked for all modes used for the shipment (for-hire truck, private truck, rail, water, pipeline, air, parcel delivery or U.S. Postal Service, other mode, unknown). The 1993 CFS produces data at the U.S., state, and National Transportation Analysis Region (NTAR) levels. There are 89 NTARs, comprised of BEA Economic Areas covering the United States.

The 1993 CFS does not cover shipments of crude petroleum and imports, which primarily affect water transportation and pipelines. Oak Ridge National Laboratory has estimated commodity flows for these two categories. Also, the Survey does not cover establishments classified in the Standard Industrial Classification as farms, forestry, fisheries, oil and gas extraction, governments, construction, transportation, households, foreign establishments, and most retail and service businesses. Furthermore, the CFS does not cover data on shipments originating in Puerto Rico and other U.S. territories and possessions. Commodities that are shipped from a foreign location to another foreign destination, through the United States (e.g., from Canada to Mexico) are also excluded from the Survey.

Commodity Movements Originating in Delaware Summary of 1993 CFS

In Delaware, the CFS measured \$16 billion of goods shipments weighing 24 million tons. Delaware accounted for approximately 0.3 percent of the value and 0.2 percent of the weight of total U.S. shipments. See attached table. The CFS data cover shipments by establishments in mining, manufacturing, wholesale, and selected retail and service industries. The data exclude most shipments of crude oil; therefore, the totals and percentages do not fully reflect the contribution of pipeline shipments.

The major commodities shipped by establishments vary when measured by value and weight. The main commodities shipped from Delaware by value were: chemicals or allied products; transportation equipment; food or kindred products; apparel or other finished textile products; and textile mill products. The main commodities shipped by weight were: food or kindred products; clay, concrete, glass, or stone products; nonmetallic minerals; lumber or wood products, excluding furniture; and primary metal products.

Local transportation of freight is important to Delaware's commerce. Approximately 59 percent of goods by weight and 28 percent of

goods by value of all shipments were between places less than 50 miles apart. In comparison, about 30 percent of the value and 56 percent of the weight of total U.S. shipments were between places less than 50 miles apart. In Delaware, about 39 percent of the value of shipments and 69 percent of the weight of shipments were between places less than 100 miles apart.

The CFS shows that in 1993, approximately 85 percent of goods by value and 72 percent by weight originating in Delaware were shipped out of state. Some of the most important destinations by value of shipments were: Pennsylvania, New Jersey, New York, Massachusetts, and Maryland. The top destination for shipments from Delaware by weight was Pennsylvania. Some other important destinations by weight were: Maryland, New Jersey, Virginia, and New York.

A majority of shipments were moved by truck, approximately 70 percent by value and 62 percent by weight. Rail accounted for about 3 percent of the value and 6 percent of the weight of shipments. Another 12 percent of the value of shipments were moved by truck and rail intermodal combinations.

1993 Commodity Flow Survey State Summary: Delaware
Tabulation by the Bureau of Transportation Statistics, U.S. Department of Transportation

Summary	Value	Weight
Total shipments originating in Delaware	\$16.1 billion	24.3 million tons
Percent of total U.S. shipments (preliminary U.S. estimate)	0.3	0.2

Commodity Shipments Originating in Delaware Ranked by Value		Commodity Shipments Originating in Delaware Ranked by Weight	
Commodity	Percent of value	Commodity	Percent of weight
Chemicals or allied products	21.1	Food or kindred products	11.8
Transportation equipment	17.1	Clay, concrete, glass, or stone products	10.0
Food or kindred products	11.9	Nonmetallic minerals	8.9
Apparel or other finished textile products	8.1	Lumber or wood products, excluding furniture	4.7
Textile mill products	4.5	Primary metal products	3.4
Other commodities	37.3	Other commodities	61.3
Total	100.0	Total	100.0

Domestic Destinations of Shipments Originating in Delaware Ranked by Value		Domestic Destinations of Shipments Originating in Delaware Ranked by Weight	
State	Percent of value	State	Percent of weight
Delaware	14.8	Delaware	27.8
